

Mayokun Olutogun graduated from Karlsruhe Institute of Technology (KIT) with an M.Sc. degree in Energy Technologies. He did his master thesis at the Helmholtz Institute Ulm (HIU) under the supervision of Dr. Dominic Bresser and Prof. Dr. Stefano Passerini, where he investigated the influence of particle size and morphology on the electrochemical performance of conversion/alloying anodes for lithium-ion batteries. At present, he is working as Ph.D. Student in the same group and investigates silicon/graphite composites as well as recycled graphite for advanced and sustainable lithium-ion batteries.
